DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group I, claims 1-3, in Paper No. 08152003 is acknowledged.

Specification

2. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States

4. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Suga et al. U.S. Patent 5,853,801 A.

Suga et al. discloses an optical compensatory sheet producing method of producing an optical compensatory sheet having a liquid crystal layer, comprising steps of: subjecting a first layer of support material to a rubbing process, so as to form an

orientation layer, said first layer including resin (see Detailed Description, paragraph 27); removing dust from said orientation layer by use of liquid to which said orientation layer is insoluble, said removing step includes polishing said orientation layer with said liquid in a direction equal to a direction of said rubbing process. (see Detailed Description, paragraph 43); and after said removing step, coating said orientation layer with coating liquid including liquid crystalline compound thereby said liquid crystal layer being formed. Suga et al. also discloses after said coating step of said coating liquid to said orientation layer, heating said liquid crystalline compound at phase forming temperature, to form said liquid crystal layer; and curing said liquid crystal layer to obtain said optical compensatory sheet (see Detailed Description, paragraphs 70 and 73).

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Payne et al. discloses a method for producing an optical compensatory sheet.
